Experiments in tape manipulation or musique concrète, early computer music, sampling and sound manipulation technologies paved the way for the creation of new sounds through technology. **Electronic musical synthesizers** that could be used practically in a recording studio became available in the mid-1960s, around the same time as rock music began to emerge as a distinct musical genre. **The Mellotron, an electro-mechanical, polyphonic sample-playback keyboard**, which used a bank of parallel linear magnetic audio tape strips to produce a variety of sounds, enjoyed popularity from the mid sixties. It was overtaken by the **Moog synthesizer**, created by Robert Moog in 1964, which produced completely electronically
